*Protecting Patrons, Guests and Employees
keeps them in business...*

SAFEGUARD Technology Inc.

presents Hi-Traction Antislip Covers for use over steps and walkways. These retrofit products eliminate costly slips and falls at Hotels, Restaurants and Casinos.

SAFEGUARD® Anti-Slip Safety Covers

Protect Your People

Kitchen prep areas in hotels, restaurants, and casinos are notorious for slippery conditions on tile floors and diamond plate steps. Now throw oil and grease into the equation, you have a recipe for disaster.

Other potential problem areas include:

- Dimly lit storage areas
- Loading dock areas and delivery entrances
- Guest entrance areas
- Shower, spa and pool areas
- Custom sized to fit your steps, walkways and landings. Step covers are produced with a standard 1" vertical lip to address the leading edge where a majority of slips and falls occur.
- Available in a range of materials of construction, most notably; lightweight and durable pultruded FRP composite fiberglass; prefabricated for fast and easy on site installation using mechanical fasteners or adhesive over any surface including wood, diamond plate (steel), quarry tile, concrete and grating.
- Able to handle the tough sanitation and cleaning of greasy environments; these covers exhibit excellent anti-corrosion properties and can withstand high pressure power washing. They also perform well in other diverse environments from cold storage and freezer units to high heat baking areas.
- An excellent safety investment providing a long-term alternative to temporary and substandard tapes, paints and rubber flooring that wear down, requiring regular replacement and providing low to no coefficient of friction value especially when wet or oily.
- Available in the widest range of Grits (coarseness) and Colors including Photoluminescent "Glow-in-the-Dark" to address any condition.

Application shown uses SAFEGUARD® Covers in food prep areas.

Before and After shots show product application.

Incorporate corporate logos or directional markings into your covers for an attractive/informative add-on.

Two-tone configurations are popular and provide additional visual safety, with enhanced aesthetic appeal. They meet ADA and California Building Codes that require

contrasting configurations on the top and bottom steps of a stairwell.

Choose from a range of contemporary colors (shown) or custom design your cover to enhance aesthetics while providing superior Antislip safety. Photoluminescent is incorporated to provide egress when the lights go out!

Coming Soon: Low Voltage Heated Covers!
Melt snow and ice in your high traffic areas with the flip of a switch! Ask us for more details.
